Forecast for Saturday 27 May 2023

Weather: A chilly start in the valleys, with a little mist in places and some high cloud perhaps moving in from the north. Fine by day with long periods of sunshine, perhaps occasionally hazy, with shallow fair-weather cloud perhaps developing above the higher summits for a time before dispersing later. The UV index will be high. Perhaps more in the way of cloud moving southwards into the evening.

Chance of cloud-free hill tops above 800m: Greater than 90%.

Low Cloud and visibility: No major impediments to visibility aside from early valley mist, with cloud generally clear of the summits. Slight haziness to the air likely.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View
Pleasant temperatures and a breeze may mask the hazard of high UV.

Forecast for Sunday 28 May 2023
Weather: Probably a cloudier start than on Saturday, but still a fine day with plenty of sunshine, especially so during the afternoon. The high UV index remains the main hazard.

Maximum wind: East or northeasterly 25mph, a dry wind over the peaks.

Chance of cloud-free hill tops above 800m: 30% at first, improving to greater than 90% once again.

Low Cloud and visibility: Areas of cloud down to 500 metres at first clearing south. Probably a clearer day visibility-wise then following compared to Saturday.

Temperature: **Valleys:** Plus 6 becoming plus 19 Celsius.
At 800m: Plus 6 becoming plus 9 Celsius.
Freezing level: Well above the summits.
